Terraform Workspace Commands

$ terraform workspace --help

To check the current workspace we are in, run the below command.
$ terraform workspace show

To list workspaces currently exist, run the list command as shown below
$ terraform workspace list

To create new workspace and select the same. We can do this by running the new command with the desired name of the new workspace as below
$ terraform workspace new dev

To switch back to default workspace, run the command as shown below
$ terraform workspace select default

To delete the workspace you need to switch to the other workspace, run the below command
$ terraform workspace select default
$ terraform workspace delete dev
